

Rock the Academy: Radical Teaching, Unbounded Learning

A NMC Symposium

Preliminary Program

This preliminary program is subject to changes as the schedule is finalized. Registrants will receive the final program a few days before the conference begins, and that program will also be posted here.

Rock the Academy: Radical Teaching, Unbounded Learning will examine themes such as open education resources and open content; social networking and global connections; guerilla learning, games, and activist learning; the next killer apps for education; alternatives to course management systems; real-time data, maps, and mobiles; backchannels and alternative communication tools; students who do research in their fields; and any technology or practice that shows promise for engaging students and supporting subversive teaching and learning.

Sessions will be presented in Second Life with a live video stream sent to a custom page on the NMC website that will allow attendees to view the Second Life sessions using a new tool and be able to participate via the web with the text chat in Second Life. For more information see <http://www.nmc.org/2008-fall-virtual-symposium/getready>

Join us for what promises to be an engaging, experimental, and informative gathering as we look at some of the new educational tools and resources.

Sessions (all sessions are listed in Pacific Time)
